The Yangshao apricot plantation of Ningbo WanHuiTongYang Fruit and Vegetable MFG Co.,Ltd were located in the southeastern hilly hinterland of Mianchi County, Henan Province, with an altitude of 300-700 meters.

It belongs to a temperate continental monsoon climate with an annual precipitation of about 690 millimeters. The climate is mild, with a large temperature difference between day and night, and the soil is brown and sticky, neutral and slightly acidic

The unique natural conditions have created the unique quality of Yangshao apricot: the fruit is large, with an average weight of 70 grams per fruit and a maximum weight of 130 grams; The skin and flesh of the fruit are orange yellow, with a blush on the sunny side;

The meat is fine and tough, dense, with less fiber, rich in juice, sweet and sour taste, strong aroma, detached from the core, and bitter kernels; Suitable for fresh consumption, it can also be processed into sugar water apricots, apricot syrup, and preserved apricots.

Regular consumption has the effects of moistening the lungs, calming asthma, promoting fluid production

**Big size 70-130g**

**Fine and tough meat  
with less fiber**

**Rich aroma**

**Juice rich**

**WANHUITONGYANG**

**万汇通洋**

The unsaturated fat acids and flavonoids in apricot pulp can soften blood vessels, reduce cholesterol and blood pressure, and effectively prevent coronary heart disease, hypertension, cerebral hemorrhage and other diseases;

The bitter almond glycoside (also known as vitamin B17) contained in fruit pulp and almonds has the effect of delaying aging. So, Yangshao apricot can be considered a good health fruit.

After the fruit ripens, the core and flesh separate, and there is a sound when shaking, also known as the "ringing apricot". The flesh is 1.3-1.8 centimeters thick, with a ratio of flesh to kernel weight of 1:0.44-0.48. The flesh is fine and tough, with less fiber, a pleasant acidity and sweetness, a rich aroma, and rich juice. The sugar water apricot and apricot syrup made from it are all of the highest quality.

The can head is easy to operate, has good peeling performance, high utilization rate, and good finished product quality.

Fresh fruits and processed products have received high praise from domestic and foreign markets. in Lijia Village, Mianchi County, the main production area of Yangshao apricots, there are still over 300 old apricot trees over a hundred years old, with lush branches and abundant fruits

**Big size 70-130g**

**Sweet and delicious**

**Rich aroma**

**Fine and tough meat**

**WANHUITONGYANG**

**万汇通洋**

**Internal quality indicators:**

**The apricot fruit is colorful and delicious, with a pleasant aroma and rich nutrition. It is rich in various organic components and essential vitamins and inorganic salts for the human body.**

**According to the quality determination of Yangshao apricot by the Quality Supervision, Inspection and Testing Center of Fruits and Seedlings of the Ministry of Agriculture, titratable acid 1.4-1.6%, total sugar 8-9%, vitamin C 11-12mg/100g, soluble solids 14-15%, zinc 1.3-1.5mg/kg, calcium 90-100mg/100kg.**

### **Legend Story**

**According to legend, during the Warring States period, when King Qin and King Zhao formed an alliance in Mianchi, King Qin did not intend to give the He Shi Bi to Lin Xiangru. Lin Xiangru said, "The Bi has flaws." The authentic tasting of fresh apricots King Qin conveniently gave the He Shi Bi to Lin Xiangru, which led to the later return of the complete Bi to Zhao. After the unification of the six states by Qin, Yangshao apricots were consecrated to the imperial palace year after year until the Han and Tang dynasties. Nowadays, in Lijia Village, Mianchi County, the main production area of Yangshao apricots, there are still over 300 old apricot trees over a hundred years old, with lush branches and abundant fruits**
